NATURAL RESOURCE

- Materials and Components found within the environment.
- Amounts of biodiversity and geodiversity
- Essential for our survival
- Satisfying our needs

NATURAL RESOURCES

Extraction

- Withdraws resources from nature
- Several Activities
 - Agriculture
 - Mining
 - Gas & Oil Drilling
 - Hunting
 - Trapping
 - Forestry

Diamond Mine in Siberia

DEPLETION OF NATURAL RESOURCES

- Use of resources beyond their rate of replacement

Causes

- Over Population
- Non equitable Distribution
- Overuse/Irrational Use
- Deforestation
- Natural Calamities
- Industrial Development etc.,

Non Equitable Distribution

Over Use/Irrational Use

- Increase in demands for economic and industrial growth the supply of resources is limited

Industrial Development

Over Population

Impact of resource depletion

- Imbalance in nature
- Shortage of materials
- Struggle for Existence
- Slackening of Economic Growth

Technical Solutions

- Alternative Resources
- Best use of Recyclable Products
- Forestation
- Resource leveling
- Control of Over Population

Practical Solutions

Reduce Power Consumption

Reduce food & water Wastage

Reduce usage of paper

Reduce usage of Auto Mobiles
